

WEB-BASED SOLUTION FOR MANAGING INFORMATION
TRADITIONALLY MANAGED WITHIN PRIVATE
ELECTRONIC ENVIRONMENTS

Abstract of the Disclosure

5 One or more aspects of managing information that were
previously performed within a private electronic environment
are now performed within a public electronic environment
off-line from the private environment. This allows the
information to be managed at a location that is
10 user-friendly, and relaxes the requirement for a synchronous
connection to the private environment. One example of
information managed in this manner is a proposal for a
contract, such as sales contract.
